Van Dyke

Copper Fox Metals Inc. (TSX.V: CUU) is a Canadian based resource company focused on the acquisition, exploration and development of large, low-cost porphyry copper-gold projects in Canada and the United States. Copper Fox's assets are located in proven mineral provinces referred to as the "Golden Triangle" in British Columbia and the "Laramide Copper Province" in Arizona, both mining friendly and geopolitically stable jurisdictions. Copper Fox's primary and most advanced asset is the 25% carried interest in the Schaft Creek Joint Venture with Teck Resources Limited which hosts one of the largest undeveloped polymetallic porphyry copper deposits in North America. Copper Fox's second most advanced asset is the 100% ownership of Van Dyke, an In-Situ Leach oxide copper project located in Arizona. The balance of Copper Fox's assets include the Sombrero Butte and Mineral Mountain exploration projects and a 39.5% equity interest in District Copper Corp. (TSX.V: DCOP), who own 100% of the Eaglehead project.

Our Investment Advantage

- Large Cu, Mo, Au and Ag Reserves and Resources defined by independent Technical Reports (see table below)
- Experienced management
- Assets are located in stable, mining friendly jurisdictions
- Optimal exploration and development project pipeline
- Provide meaningful growth in the short and long term
- Significant exploration potential with excellent JV opportunities

Copper and molybdenum in millions of pounds, gold and silver in millions of ounces. Numbers rounded to reflect best practise principles. Copper Fox owns 25% of Schaft Creek project and 100% of Van Dyke project. Above stated Proven and Probable Reserves are included in the Measured and Indicated Resources reported for the Schaft Creek Project. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

(1) Technical Report "Feasibility Study on the Schaft Creek Project, BC, Canada", dated January 23, 2013, prepared by Tetra Tech, A. Farah, P. Eng.; et al as Qualified Persons; at 0.15%CuEq cutoff. Reserves reported at \$6.60/tonne net smelter return (NSR) cutoff. (2) "Technical Report and Resource Estimation for the Van Dyke Copper Project", dated January 30, 2015 prepared by Moose Mountain Technical Services, S. Bird, P.Eng and R. Lane, P. Geo as Qualified Persons; at 0.05%TCu cutoff.

Schaft Creek – Feasibility Study

- 21 year mine life at 130,000 tonnes per day conventional open pit
- Low C1 cost per pound Cu (US\$1.02)
- At Mine Revenue and Net Free Cash Flow significantly impacted by Foreign Exchange
- Potential economic enhancements identified
- NI 43-101 Technical Report confirmed this project has positive NPV and IRR
- 2018 desktop studies to identify scenarios that maximize the value of the project

Based on Technical Report prepared by Tetra Tech titled "Feasibility Study on the Schaft Creek Project, BC, Canada" with Effective Date January 23, 2013, A. Farah, P. Eng., et al as Qualified Persons. Since the date of filing this report many of the input parameters used in the feasibility study have changed significantly, including but not limited to, a decline in metal prices and a significant increase in FOREX.

Van Dyke - Preliminary Economic Assessment

- 11 year mine life at 60 MM lbs per year Y1-Y6
- Direct cash cost per pound Cu (US\$0.60)
- At Mine Revenue and Net Free Cash Flow significantly impacted by Cu price & recovery
- Potential economic enhancements identified
- NI 43-101 Technical Report confirmed this project has positive NPV and IRR

The PEA is preliminary in nature, it includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA will be realized. The basis for the PEA, qualifications and assumptions made by the qualified persons ("QP") are based on the "Preliminary Economic Assessment Technical Report for the Van Dyke Copper Project", dated Dec. 18, 2015, J. Gray, P.Eng., et al as QPs. The PEA is the first current engineering technical study undertaken on the Van Dyke copper project.

Sombrero Butte – Exploration

- Titan 24 DCIP survey outlined two positive chargeability/resistivity anomalies
- Breccia study upgraded exploration targets to drill ready stage

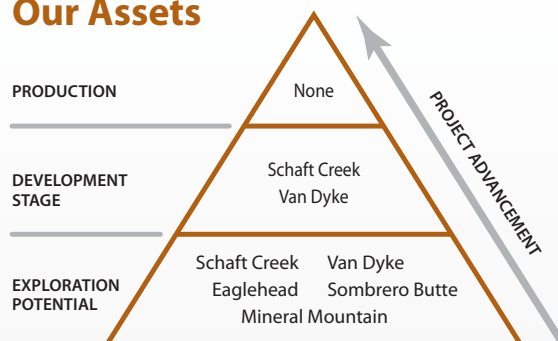

Mineral Mountain – Exploration

- Project is located on the same structural trend that hosts the Florence and Resolution copper deposits in Arizona
- Bedrock sampling outlined a 1,100m x 900m area of Cu-Mo-Au porphyry style mineralization with a significant number of samples containing between 1% and up to 6.6% copper
- Two porphyry targets identified

District Copper Investment – Eaglehead Project

- Copper Fox owns 39.5% of District Copper who in turn own 100% working interest in the Eaglehead Project which hosts an 8km long porphyry Cu-Au-Mo-Ag system
- NI 43-101 Technical Report completed in 2017 recommends a C\$4.95 million drilling, geophysics and metallurgical testwork program
- 2018 program (\$0.5 million) completed, results pending
